

Background

The purpose of the PRD is to provide the requirements and product vision of developing a personal health AI assistant. The AI assistant will need to have access mychart lab results through APIs/ Connector. It will show trends analytics and tabulated form of key lab results and will provide LLM based chat capability for users to ask questions about his lab results.

Users

- Health conscious individual or patients who wants to track their lab results effectively

Pain Points

- **Lack of AI intelligence with standard health provider tools:** Currently tools as such as mychart application does not provide AI assistant information and visualization to track your test lab results and does not provide AI insights
- **Fragmented personal health information:** Lab results are usually fragmented between different providers or systems, which makes it hard to understand overall trends and insights.

Scope

Phase-1 MVP

- Build only for personal use with access only to my own account information to simplify authorization requirements
- Connect to mychart
- Local web-based app.

Phase-2

- Integrate this to personal messaging tools such as whatsapp for ability to query, only personal use
- Multi- modal: Allow uploading test results from different sources such as excel, images

Phase-3

- Scale, create an apple store application for users.

High-Level System Architecture

Requirements

Requirement	Description	Phase
Integration to mychart	Integrate application to Mychart application provider and provide authentication to my own account information.	p0
Lab Results Visualization	- Provide a tabulated view of all lab results - Group table by type of labs based on relevance - Provide a filter if you want to filter only by set of labs results	P0
Trend Visualization View	- Allow to filter by set of lab results - Provide a trended visualization for each lab results	P0
LLM Summary	Provide an LLM Summary of key results, trends, and considerations	P0
LLM Chat Window	Provide a side chat window that allow asking question about certain lab results.
